Correction to Table 1

This document presents a corrected version of Table 1 in the SIATEC-C paper. The original results were produced with a version of the *posemir* code package that computed bounding boxes incorrectly. Hence the MIREX metrics for COSIATEC, SIATECCompress, COSIATEC-C, and SIATEC-CCompress were incorrect. No other results were impacted. The greatest difference is that SIATEC-CCompress achieves highest values on many metrics. Hence SIATEC-C provides improvements to accuracy also when combined with compression-based algorithms unlike in the originally published table.
